Course overview
This is a workshop suitable for Physiotherapists / Occupational therapists treating patients with peripheral neuropathy. The course will focus on assessment & fabrication of splints of hand & foot for patients with common peripheral neuropathy including carpal tunnel syndrome, Ulnar nerve compression, Foot drop, Tarsal Tunnel Syndrome, etc.

Participants will have the opportunity to fabricate a few basic splints like cylindrical cast, thumb spica, opponens loops & lumbral loops, foot drop splint. The fabrication of each splint will be demonstrated by skilled professionals with step by step design and fabrication instructions.

This course will also brush up adaptive device for those conditions.

Course Objectives
At the end of the workshop the participants will be able to:
1. Understand the principles of splint making
2. Recognize the components of splints.
3. Recognize the indications and contraindications of splints.
4. Make basic splints for common peripheral neuropathies
5. Understand adaptive devices and advantages.
